Quest®

Simplified Microsoft Teams migration and management

Microsoft Teams discovery, migration and reporting

The fastest-growing application in the Microsoft portfolio is Teams. Period. However, this rapid growth also introduces serious concerns for any IT department, including how to best manage Microsoft Teams on a daily basis and how to consolidate Teams during mergers and acquisitions. The growth of Teams shows no sign of slowing down. Microsoft continues to invest heavily in its development and they're actively pushing it as the successor to Skype for Business.

If you're not one of the organizations currently working in Teams, it's only a matter of time.

With Quest, you can get your Teams in order before it's too late and prepare your organization for future growth. Quickly discover what Teams have been

created, who is accessing them and when they were last used so you can stay on top of Teams management and mitigate sprawl. You can also report on your Teams prior to migration — and then again after — to ensure permissions and content have all been migrated properly.

And if you're looking to migrate to Teams, Quest can get you there. Whether you're migrating Teams from one Office 365 tenant to another or getting content out of file shares, Box, Dropbox and Google Drive, we can easily move your data with minimal disruption to the business.

Only with Quest can you get ahead of Teams migrations and management to save valuable time and resources as well as ensure compliance with internal and industry standards.

> "As adoption of Microsoft Teams continues to grow, we're pleased to see Quest offering solutions that address the needs of Teams customers."
>
> *Mike Ammerlaan, Director, Microsoft 365 Ecosystem at Microsoft Corp*

BENEFITS:

- Discover all existing Teams and identify team members, groups and who has access to what resources in your environment

- Avoid group sprawl in your Office 365 environment with visibility into what Teams are being created and how they're being used

- Migrate Teams from one Office 365 tenant to another while preserving data and collaboration

- Simplify the path to Teams with seamless content migration from file shares, Box, Dropbox and Google Drive

- Ensure migration validity with increased visibility into Teams access and permissions

Discover, assess, migrate to and report on your Microsoft Teams environment with Quest.

FEATURES

Microsoft Teams discovery

Quickly discover and report on what Teams exist in your Office 365 environment, who the Team members are, and how the Team is being used. Quest makes it easy to stay on top of Teams growth to avoid group sprawl and monitor usage.

Pre- and post-migration assessments

Increase visibility into the Teams in your environment as well as who has what permissions to ensure everything migrates correctly.

Teams tenant-to-tenant migration

Simply and securely consolidate and migrate Office 365 tenants including Teams content, but also Exchange Online, OneDrive and SharePoint Online workloads.

Ensure that users never lose valuable data stored in Teams channels, conversations, and documents. Allow users to continue to participate and interact in discussions even after they have been migrated including all historical data. You can also merge or rename Teams as they are migrated to the new target tenant.

File systems migration to Teams

Easily move content from file shares, Box, Dropbox and Google Drive into Teams files while preserving values, managed metadata and approval statues. You can also convert source metadata into your desired target field type.

Security and compliance reporting

Improve compliance with security best practices, internal policies and external regulations with visibility into the configuration of all critical IT assets in your Teams environment.

ABOUT QUEST

Quest provides software solutions for the rapidly changing world of enterprise IT. We help simplify the challenges caused by data explosion, cloud expansion, hybrid data centers, security threats and regulatory requirements. Our portfolio includes solutions for database management, data protection, unified endpoint management, identity and access management and Microsoft platform management.
